

CLAIMS

I claim:

sub a' 7
1. A weatherized posting board assembly comprising:
a back frame enclosure having two side members, a top member
and a bottom member, all integral at an interior edge with a
back member, the back member having interior and exterior
surfaces, the exterior surface having a mounting brace
projecting therefrom, the mounting brace adaptable for
connection to at least two different vertical supports;

a posting board mounted on an interior surface of the
back member;

a front cover hingedly connected to said back frame
enclosure, the front cover having two side members, a top
member and a bottom member, all integral at an interior edge
with a transparent front panel, said side, top, and bottom
members of said front cover corresponding to the side, top,
and bottom members of the back frame enclosure, the front
cover positionable between open and closed positions, said
side, top, and bottom members of the front cover overlapping
the side, top, and bottom members of the back frame
enclosure when the front cover is in the closed position.

2. The device of claim 1 wherein the posting board can
be releasably, lockably secured to the interior surface of
said back member.

3. The device of claim 1 where said mounting brace has a pair of axially aligned recesses, the recesses sized to allow a post to be at least partially seated therein.

4. The device of claim 1 wherein said mounting brace has a plurality of raised portions protruding therefrom, the raised portions having apertures formed therein thereby allowing connection of said mounting brace to a corresponding plurality of connectors extending from a vertically extending surface.

5. The device of claim 1 where said front cover is made of a transparent material.

6. The device of claim 1 where said front cover has a locking mechanism secured thereto for locking said front cover to said back frame.
